Environmental Sanitation

Who We Are?

At DPOLUX, we aim to position ourselves as the leading company in comprehensive solutions for waste management, industrial cleaning, and environmental services.

Our vision is to transform the conventional way in which companies receive environmental sanitation services, by using cutting-edge technology in equipment and software to optimize processes, reduce environmental impacts, and maximize operational efficiency.

we analyze your problem

Presence of pests and health risks

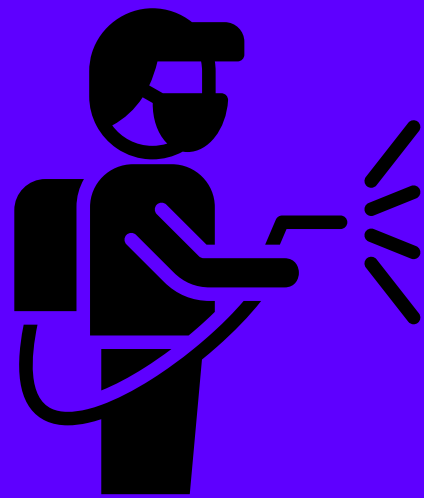

Spread of diseases and contamination of products or work areas

Economic losses and reputational damage

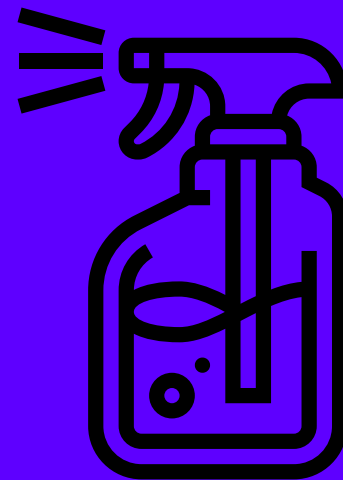

Operational interruptions and financial losses

our services

Pest Control – Insect & Rodent Management

We eliminate insect and rodent pests through safe and effective methods, ensuring hygiene and protection. Specific treatments are applied according to the type of pest and the environment to be treated.

Disinfection

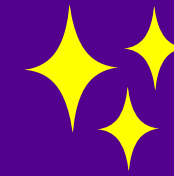

We eliminate viruses, bacteria, and fungi with certified products, ensuring hygienic and safe spaces. Ideal for homes, offices, and businesses.

General Pest Control

We prevent and eradicate insects, rodents, and other invaders using safe and effective techniques. Protecting homes and businesses, we guarantee a clean and risk-free environment.

Client Benefits

At DPOLUX, we provide disinfection and pest control services tailored to each client, using efficient and eco-friendly methods that do not affect operations.

As an added value, we design preventive maintenance plans to avoid future problems.

**Electric Backpack
Sprayer**

**Electrostatic
Sprayer**

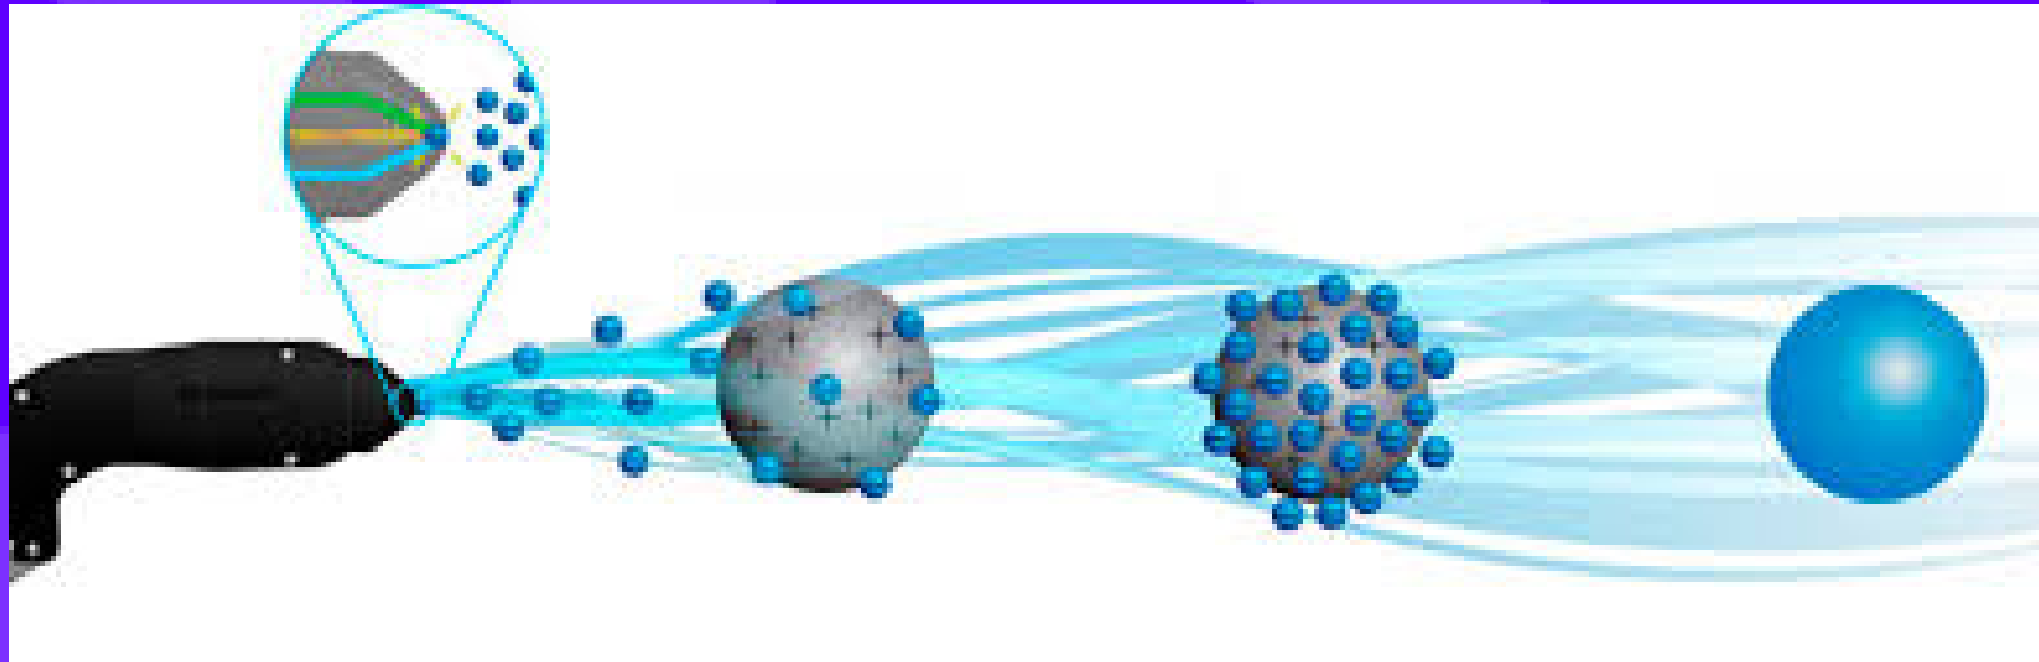

**Thermal
Fogger**

specialized service

We have highly trained personnel for the effective control of birds, rodents, insects, and pathogenic microorganisms, applying specific treatments according to each type of pest.

Protect your space with safe and specialized solutions!

disinfection and fumigation

Maximize disinfection and fumigation effectiveness with electrostatic sprayers. Their charge technology improves adhesion, ensuring uniform coverage and reaching hidden areas.

Greater efficiency, less effort, and immediate results.

**Reduces waste
Optimizes product use
Enhances protection**

integrated pest management

Insects & Arachnids

Rodents

Birds

integrated pest management

**Pathogenic
Microorganisms**

Pathogenic microorganism treatment is carried out through disinfection with biocidal products, fogging, or ultraviolet light, eliminating viruses, bacteria, and fungi.

Additionally, preventive measures are implemented to avoid proliferation.

how we work?

1

Initial inspection and assessment

To determine the appropriate treatment methodology.

2

Preparatory steps

Informing occupants about the fumigation.

3

Product application

Controlled application in affected areas.

4

Report & Recommendations

Guidance on preventing future pest outbreaks.

“Focus on What Really Matters”

While our expert team takes care of fumigation and pest control, we guarantee a safe and pest-free environment for your company.
